

## Amarinth

Amarinth delivers world-leading expertise in the design, application and manufacture of end suction centrifugal pumps in a variety of standard and exotic alloys to API, ISO & ANSI standards for use primarily in the Petrochemical, Oil & Gas, Chemical, Pharmaceutical and General Industrial markets. In addition, Amarith designs and manufactures the “Protect System” range of seal support systems for use with both Amarith and other manufacturers’ pumps or mixers. Many of its products interchange with the Girdlestone pump ranges providing re-engineered spares or an effective pump upgrade without the need to modify any pipe work or mountings.

## Protect System

Protect System, a division of Amarith Limited, specialises in high quality seal support systems adapted to suit a customer’s specific needs. The products are designed and manufactured to PED 97/23/EC and API 682 to support the double mechanical seals in use on pumps and mixers. All the products carry Lloyds Approval. Protect System offers solutions ranging from a basic ISO Plan 10 or 11 to fully compliant API 682 Plan 52, 53A, 53B, 53C and 54 vessels with full condition monitoring. The products are designed for use on and offshore with customer specifications and standards such as Norsok being offered.
