Amarinth has secured an order for the supply of pumps for the *Agogo* FPSO vessel in Angola.

The order has been placed by an undisclosed Norwegian energy recovery and water treatment specialist.

Amarinth's pump design is tailored for low NPSH duties, a critical requirement for the confined spaces on FPSO vessels.

These pumps are built to comply with Norsok M-630 standards, ensuring they meet the stringent material specifications required for offshore petrochemical applications.

Amarinth managing director Oliver Briggingshaw said: "Securing a second order with this important Norwegian customer, this time for the FPSO *Agogo*, represents another significant milestone for Amarith in our commitment to delivering high-performance solutions in the most demanding of environments, particularly within the burgeoning FPSO market.

Due to be commissioned in the fourth quarter of 2025, the *Agogo* FPSO is under construction by Yinson Production.

It will be operated as part of *Agogo* integrated west hub development project in block 15/06 offshore Angola.

The field plan involves 36 new wells including 21 producers and 15 injectors, and one FPSO vessel with a production capacity of 120,000 barrels per day (bpd) of oil.

The *Agogo* Integrated West Hub aims to produce hydrocarbons from the *Agogo* and *Ndungu* Fields through the new *Agogo* FPSO unit and the existing *Ngoma* FPSO system. It is expected to have a peak production capacity of 175,000bpd.

Last year, Azule Energy, through its subsidiary *Eni Angola*, [secured contracts to support](#) the development of the *Agogo* Integrated West Hub Project.
